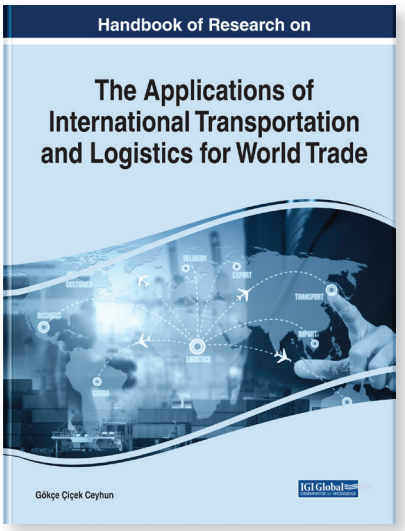
Handbook of Research on the Applications of International Transportation and Logistics for World Trade



Part of the Advances in Logistics, Operations, and Management Science Book Series

Gökçe Çiçek Ceyhun (Bursa Technical University, Turkey)

Description:

In today's developing world, international trade is a field that is rapidly growing. Within this economic market, traders need to implement new approaches in order to satisfy consumers' rising demands. Due to the high level of competition, merchants have focused on developing new transportation and logistics strategies. In order to execute effective transportation tactics, decision makers need to know the fundamentals, current developments, and future trends of intercontinental transportation.

The **Handbook of Research on the Applications of International Transportation and Logistics for World Trade** provides emerging research exploring the effective and productive solutions to global transportation and logistics by applying fundamental and in-depth knowledge together with current applications and future aspects. Featuring coverage on a broad range of topics such as international regulations, inventory management, and distribution networks, this book is ideally designed for logistics authorities, trading companies, logistics operators, transportation specialists, government officials, managers, policymakers, researchers, academicians, and students.
