Design, Development, and Use of Secure Electronic Voting Systems

Part of the Advances in Electronic Government, Digital Divide, and Regional Development Book Series

Dimitrios Zissis (University of Aegean, Greece) and
Dimitrios Lekkas (University of Aegean, Greece)

In modern electoral processes, Information and Communication Technologies play a crucial role, whether used in voter registration, ballot casting, or processing of results. Securing these systems is a necessary step in ensuring the fairness of the democratic process.

Design, Development, and Use of Secure Electronic Voting Systems analyzes current research on the integration of modern technologies with traditional democratic systems, providing a framework for designing and deploying electronic voting systems in any context or society. Stakeholders, researchers, architects, designers, and scholars interested in the use of electronic systems in government processes will use this book to gain a broader understanding of some of the latest advances in this emerging field.

Topics Covered:

- Electronic Voting
- Accessibility
- Usability
- Design Features
- Mobile Voting
- Political Requirements
- Privacy and Anonymity
- Social Lessons
