

# Green Public Procurement Strategies for Environmental Sustainability

Part of the Advances in Environmental Engineering and Green Technologies Book Series

Rajesh Kumar Shakya (The World Bank, USA)

## Description:

The worldwide consumption of resources is causing environmental damage at a rate that cannot be sustained. Apart from the resulting environmental and health problems, this trend could threaten economic growth due to rapidly decreasing natural resources and the cost of addressing these issues. The public sector has a responsibility to stimulate the marketplace in favor of the provision of more resource-efficient and less polluting goods, services, and works in order to support environmental and wider sustainable development objectives.

**Green Public Procurement Strategies for Environmental Sustainability** provides innovative insights on the adoption and implementation of green public procurement for sustainable practice in order to contribute to environmental protection. The content within this publication examines climate change, sustainable development, and document analysis and is designed for policymakers, environmentalists, managers, suppliers, development agencies, government officials, academicians, researchers, students, and professionals.

ISBN: 9781522570837
