

Advancing Equity in Global Healthcare Systems

Eriko Matsumoto (Translational Research Center for Medical Innovation, Japan)
 Frederic Andres (National Institute of Informatics, Japan)
 Rajeev K. Agrawal (IEEE, USA)

Description:

Achieving equitable healthcare is one of the most critical challenges facing global society today, as systemic disparities continue to limit quality care for marginalized and underserved populations. Health outcomes are profoundly shaped by intersecting factors such as socioeconomic status, geographic location, race, gender, and policy environments. Addressing these disparities requires not only medical interventions but also structural reforms and interdisciplinary collaboration. Emerging technologies, universal healthcare models, and inclusive policy frameworks offer promising pathways for reducing inequality and improving health outcomes worldwide. Ensuring equity in healthcare ultimately strengthens societal resilience, promotes human dignity, and advances global well-being.

Advancing Equity in Global Healthcare Systems explores the systemic barriers that perpetuate health disparities, particularly in marginalized and underserved communities, and presents innovative approaches to overcoming these inequalities. Drawing on interdisciplinary research from global health, public policy, sociology, and medical sciences, it highlights real-world case studies, emerging technologies, and policies that have proven effective in advancing equitable healthcare. Covering topics such as artificial intelligence, geriatric nursing, and health literacy, this book is an excellent resource for healthcare providers, public health officials, community health workers, administrators, researchers, academicians, policymakers, technology innovators, educators, and more.

ISBN: 9798337313306 **Pages:** 316 **Copyright:** 2026 **Release Date:** 8/15/2025

Hardcover: \$225 **Softcover:** \$185 **E-Book:** \$215 **Hardcover + E-Book:** \$270

Topics Covered:

Artificial Intelligence (AI)	Geriatric Nursing
Bias and Inequality	Health Equity
Child Autism	Health Expenditures
Clinical Decision Support	Health Literacy
Digital Health Tools	Nursing Equitability
Edge Computing	
Enhanced Inception Networks	
Ethical Implications	

Subject: Medicine and Healthcare

Readership Level: Advanced-Academic Level (Research Recommended)

Classification: Edited Reference

Research Suitable For: Advanced Undergraduate Students; Graduate Students; Researchers; Academicians; Professionals; Practitioners
