

Decision Support for Construction Cost Control in Developing Countries

Chrispin Pettang (University of Yaoundé I, Cameroon), Marcelline Blanche Manjia (University of Yaoundé I, Cameroon) and F. Henry Abanda (Oxford Brookes University, UK)

Description:

The continued growth of emerging nations depends largely on the development of their built infrastructures and communities. Roads, dams, bridges, hospitals, schools, and housing are all examples of the built environment that impacts economic improvements in the developing world.

Decision Support for Construction Cost Control in Developing Countries explores how the construction industry contributes to a nation's GDP and the related cost issues and proposed cost reduction solutions for construction projects and initiatives in developing regions. Emphasizing the role of decision support systems for reducing and managing the costs associated with construction projects.

Readers:

This title is an essential reference source for civil engineers, business and engineering managers, project managers, researchers, and professionals in the construction industry.
