Dynamic Methods and Process Advancements in Mechanical, Manufacturing, and Materials Engineering

ISBN: 9781466618671; © 2013; 396 pp.

Print: US \$195.00 | Perpetual: US \$295.00 | Print + Perpetual: US \$390.00

Pre-pub Discount:*

Print: US \$185.00 | Perpetual: US \$280.00

* Pre-pub price is good through one month after publication date.

J. Paulo Davim (University of Aveiro, Portugal)

Engineering and design are often a necessary steps for an industry to become effective. Industry modeling can help to bridge the communication gap among engineers and system designers.

Dynamic Methods and Process Advancements in Mechanical, Manufacturing, and Materials Engineering examines the principles of physics and materials science for analysis, design, manufacturing and maintenance of mechanical equipments and systems. Targeting researchers, practitioners, and academicians, this volume promotes innovative findings in mechanical, manufacturing and materials engineering.

Topics Covered:

- Al₂O₃ Nanobricks via an Organic Free Route
- Chip Formation Process in Orthogonal Machining
- Cold End Forming Of Welded Steel Tubes
- Copper Oxide (CuO) Nanoparticles
- Electroless Ni-B Coatings
- High Speed Machining
- Hydro-Pneumatic Friction Damper Suspension System
- Large Amplitude Forced Vibration Analysis
- Laser Forming of Plates and Tubes
- Laser Sub-Micron Patterning
- Methods to Support Sustainable Manufacturing
- Micro Machining of Nonconductive Al₂O₃ Ceramic
- Multiple Attribute Decision Making Method
- Oxidation of Stainless Steels During Hot Rolling
- Recycling of Waste Epoxy-Polyester Powders
- Reinforced Carbon-Phenolic and Carbon-Epoxy Composites
- Setup Planning and Operation Sequencing for Prismatic Parts
- Shape Optimization Problems in Engineering
- SLA Copper Shelled Electrodes
- Thermoplastic Resin for Vacuum Infusion Process

Market: This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.

J. Paulo Davim received his PhD degree in Mechanical Engineering from the University of Porto in 1997 and the Aggregation from the University of Coimbra in 2005. Currently, he is an Aggregate Professor at the Department of Mechanical Engineering of the University of Aveiro. He has more 25 years of teaching and research experience in manufacturing, materials and mechanical engineering with special emphasis in machining and tribology. Recently, he has also interest in sustainable manufacturing and industrial engineering. He is the Editor-in-Chief of six international journals, guest editor of journals, books editor, book series editor and scientific advisory for many international journals and conferences. Presently, he is an editorial board member of 20 international journals and acts as reviewer for than 70 prestigious ISI Web of Science journals. In addition, he has also published in his field of research as author and co-author more than 40 book chapters and 350 articles in journals and conferences (more 180 articles in ISI Web of Science, h-index 25+).
