Resilient Optical Network Design: Advances in Fault-Tolerant Methodologies

Yousef S. Kavian (Shahid Chamran University, Iran)
and Mark S. Leeson (University of Warwick, UK)

Dense wavelength division multiplexing (DWDM) optical networks are prone to failure, which can potentially lead to a catastrophic loss of data and revenue. Given this, one of the most important optical network design issues is survivability or the ability of a network to provide continuous service at an acceptable level in the presence of different failure scenarios.

Resilient Optical Network Design: Advances in Fault-Tolerant Methodologies is a collection of the latest contributions to the area of survivability in optical networks. Each chapter focuses on theoretical and practical aspects of network survivability methodologies applied to real world scenarios, making this a useful reference for research and development engineers, graduate students studying optical networks, and senior undergraduate students with a background in algorithms and networking.

Topics Covered:

- Capacity Allocation in Survivable Networks
- Fault Management in Survivable Networks
- Fault-Tolerant Networks
- Multiple Failures Survivability
- P-Cycle Survivability Architectures
- Protection Survivability Architectures
- Restoration Survivability Architectures
- Robust Survivable Networks
- Survivability in Optical Networks
- Traffic Grooming in Survivable Networks

Market: This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.

Yousef S. Kavian received the B.Sc. (Hons) degree in Electronic Engineering from the Shahid Beheshti University, Tehran, Iran, in 2001, the M.Sc. degree in Control Engineering from the Amkabar University, Tehran, Iran, in 2003, and the Ph.D. degree in Electronic Engineering from the Iran University of Science and Technology, Tehran, Iran, in 2007. After one year appointment at Shahid Beheshti University, in 2008, he joined the Shahid Chamran University as an Assistant Professor. He worked as a postdoctoral research fellow at Esslingen University and IAER, Germany, in 2010. His research interests include digital circuits and systems design, optical, and wireless networking. Dr Kavian has over 50 technical publications including journal, conference papers, and book chapters in these fields. He is a senior industrial engineer and trainer with more than 10 years industrial experiences.

Chapter 1

Survivability in Optical Networks:

Wang Bin (Wright State University, USA)

Chapter 2

Protection Survivability Architectures:

Babarczy Péter (Budapest University of Technology and Economics, Hungary)

Tapolcai János (Budapest University of Technology and Economics, Hungary)

Chapter 3

Protection Architectures for WDM Passive Optical Networks

Sivakumar Anusha (Indian Institute of Technology Madras, India & India UK Advanced Technology Center of Excellence in Next Generation Networks, Systems and Services, India)

Sankaran Ganesh C. (Indian Institute of Technology Madras, India & India UK Advanced Technology Center of Excellence in Next Generation Networks, Systems and Services, India)

Sivalingam Krishna M. (Indian Institute of Technology Madras, India & India UK Advanced Technology Center of Excellence in Next Generation Networks, Systems and Services, India)

Parr Gerard (University of Ulster, UK & India UK Advanced Technology Center of Excellence in Next Generation Networks, Systems and Services, UK)

Chapter 4

Fault Management in Transparent Optical Networks

Machuca Carmen Mas (Technische Universität München, Germany)

Chapter 5

All-Optical Resilient Pulse-Position-Modulation-Based Packet-Switched Routing

Ghassemlooy Z. (Northumbria University, UK)

Ng W. P. (Northumbria University, UK)

Le Minh H. (Northumbria University, UK)

Chapter 6

Performance Evaluation of Survivability Approaches in Optical Networks

Eshoul Abdelhamid (University of Ottawa, Canada)

Mouftah Hussein T. (University of Ottawa, Canada)

Chapter 7

Maximizing Primary Capacities in Survivable Networks

Somani Arun K. (Iowa State University, USA)

Lastine David W. (Iowa State University, USA)

Chapter 8

Dynamic Traffic Grooming under a Differentiated Resilience Scheme for WDM Mesh Networks

El-Gorashi Taisir E.H. (University of Leeds, UK)

Elmirghani Jaafar M. H. (University of Leeds, UK)

Chapter 9

Robust Design and Management of Optical Networks:

Mouftah Hussein T. (University of Ottawa, Canada)

Kantarci Burak (University of Ottawa, Canada)

Chapter 10

New Dimensions for Survivable Service Provisioning in Optical Backbone and Access Networks

Monti Paolo (Royal Institute of Technology, Sweden)

Cavdar Cicek (Royal Institute of Technology, Sweden)

Chen Jiajia (Royal Institute of Technology, Sweden)

Wosinska Lena (Royal Institute of Technology, Sweden)

Fumagalli Andrea (The University of Texas at Dallas, USA)

Chapter 11

Distributed Quality of Service Based Provisioning Framework for Survivable Optical Networks

Al Sukhni Emad M. (University of Ottawa, Canada)

Mouftah Hussein T. (University of Ottawa, Canada)

Chapter 12

Self-healing on Transparent Optical Packet Switching Mesh Networks:

Razo-Zapata Iván S. (ITESM, Mexico)

Castañón Gerardo (ITESM, Mexico)

Mex-Perera Carlos (ITESM, Mexico)

Chapter 13

Optical Communication:

Strobel Otto (Esslingen University of Applied Sciences, Germany)

Seibl Daniel (Esslingen University of Applied Sciences, Germany)

Lubkoll Jan (Friedrich-Alexander University Erlangen-Nuremberg, Germany)
