Interoperability in Digital Public Services and Administration: Bridging E-Government and E-Business

Yannis Charalabidis (National Technical University of Athens, Greece)

During the last decade, interoperability has emerged as a vivid research area in electronic business and electronic governance, promising a significant increase in productivity and efficiency of information systems, enterprises and administrations.

Interoperability in Digital Public Services and Administration: Bridging E-Government and E-Business provides the latest research findings such as theoretical foundations, principles, methodologies, architectures, technical frameworks, international policy, standardization and case studies for the achievement of interoperability within the provision of digital services, from administration and businesses toward the user citizens and enterprises.

Topics Covered:

- Challenges of implementing e-government interoperability
- National interoperability frameworks
- Finding and sharing e-government resources
- Interoperability requirements, recommendations and standards in e-participation
- Model-driven development
- Interoperability for agile cross-organizational collaborations
- Interoperability for social services information management
- Scientific foundation for interoperability
- Knowledge interoperability
- Benefit of interoperability
