Model-Driven Domain Analysis and Software Development: Architectures and Functions

Janis Osis (Riga Technical University, Latvia) and Erika Asnina (Riga Technical University, Latvia)

Software developers use different techniques for identification and specification of a domain's characteristics and requirements for a planned application. The importance of this step cannot be understated as it is impossible to be highly efficient with a weak beginning, even with a strong end of the software development life cycle.

Model-Driven Domain Analysis and Software Development: Architectures and Functions displays how to effectively map and respond to the real-world challenges and purposes which software must solve. The implications can be far-reaching and apply to domains such as mechatronic, embedded and high risk systems, where failure could cost human lives. It is also important for complex business systems, wherein failures could lead to huge financial losses. This book forms an essential reference for developers and researchers by providing both cases and theories to ensure a strong and suitable domain analysis to support all other efforts when creating and applying software solutions.

Topics Covered:

- Concurrent Model Driven Automation Engineering
- Improving Software Development Productivity
- Domain-Driven Approach for Enterprise Development
- Software Product Lines
- Architecture-Centric Development
- Requirements-driven Reuse of Software Design Models
- Architecture-Centric Development of Java
- Model-driven Testing and Domain Analysis
- Model-Driven Performance Evaluation
- Distributed Real-time and Embedded Systems

ISBN: 9781616928742; © 2011; 518 pp.

Print: US \$180.00 | Perpetual: US \$255.00 | Print + Perpetual: US \$360.00

Market: This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.

Janis Osis graduated from Latvian University cum lauda and received diploma of Electrical engineering in electrical systems (1953). Dr. Osis in automatics from Kaunas Technological University, Lithuania (1961), Dr. Osis in system analysis from Latvian Academy of Sciences (1972). Since 1965, his research interests are topological modeling of complex systems with applications in technical and medical diagnostics. Recent fields of interest are object-oriented system analysis, modeling and design, formal methods of software engineering, software development within the framework of MDA by means of topological functioning model. His work experience includes teacher and researcher positions - at University of Latvia: an assistant, Faculty of Mechanics; Riga Technical University: a lecturer, Faculty of Energetic; a docent and a dean, Faculty of Automatics and Computer Engineering; a professor, Faculty of Computer Science and Information Technology since 2001. The list of publications contains more than 250 titles including 15 books. He is an honorary member of Latvian Academy of Sciences and a member of the International Editorial Board of the journal Automatic Control and Computer Sciences, Allerton Press, Inc.

Publishing Academic Excellence
at the Pace of Technology Since 1988

Section 1: Theory-Driven Holistic Domain Modeling and Analysis in the Context of MDA

Chapter 1

Is Modeling a Treatment for the Weakness of Software Engineering?

Osis Janis (Riga Technical University, Latvia)
Asnina Erika (Riga Technical University, Latvia)

Chapter 2

Topological Modeling for Model-Driven Domain Analysis and Software Development:

Osis Janis (Riga Technical University, Latvia)
Asnina Erika (Riga Technical University, Latvia)

Chapter 3

Topological Functioning Model as a CIM-Business Model

Asnina Erika (Riga Technical University, Latvia)
Osis Janis (Riga Technical University, Latvia)

Chapter 4

Derivation of Use Cases from the Topological Computation Independent Business Model

Osis Janis (Riga Technical University, Latvia)
Asnina Erika (Riga Technical University, Latvia)

Chapter 5

A Multidimensional Approach for Concurrent Model-Driven Automation Engineering

Rose Sebastian (Technische Universität Darmstadt, Germany)
Lauder Marius (Technische Universität Darmstadt, Germany)
Schlereth Michael (Siemens AG, Germany)
Schürr Andy (Technische Universität Darmstadt, Germany)

Section 2: Model-Driven Engineering and Model-Driven Architecture

Chapter 6

Model-Driven Configuration of Distributed Real-time and Embedded Systems

Dougherty Brian (Vanderbilt University, USA)
White Jules (Virginia Tech, USA)
Schmidt Douglas C. (Vanderbilt University, USA)

Chapter 7

Model-Driven Automated Error Recovery in Cloud Computing

Sun Yu (University of Alabama at Birmingham, USA)
White Jules (Virginia Tech, USA)
Gray Jeff (University of Alabama, USA)
Gokhale Aniruddha (Vanderbilt University, USA)

Chapter 8

Productivity Analysis of the Distributed QoS Modeling Language

Hoffert Joe (Vanderbilt University, USA)
Schmidt Douglas C. (Vanderbilt University, USA)
Gokhale Aniruddha (Vanderbilt University, USA)

Chapter 9

Domain-Driven Reuse of Software Design Models I

Kalnins Audris (IMCS University of Latvia, Latvia)
Śmialek Michał (Warsaw University of Technology, Poland)
Kalnina Eliina (IMCS University of Latvia, Latvia)
Celms Edgars (IMCS University of Latvia, Latvia)
Nowakowski Wiktor (Warsaw University of Technology, Poland)
Straszak Tomasz (Warsaw University of Technology, Poland)

Chapter 10

Quality-Driven Database System Development

Dubielewicz Iwona (Wrocław University of Technology, Poland)
Hnatkowska Bogumila (Wrocław University of Technology, Poland)
Huzar Zbigniew (Wrocław University of Technology, Poland)
Tuzinkiewicz Lech (Wrocław University of Technology, Poland)

Chapter 11

Exploring Business Value Models for E-Service Design

Zdravkovic Jelena (Stockholm University & Royal Institute of Technology, Sweden)
Ilayeruma Tharaka (Stockholm University & Royal Institute of Technology, Sweden)

Chapter 12

An MDA Approach for Developing Executable UML Components

Motogna Simona (Babeş-Bolyai University, Romania)
Pârv Bazil (Babeş-Bolyai University, Romania)
Lazăr Ioan (Babeş-Bolyai University, Romania)

Section 3: Modeling of Product Lines and Patterns

Chapter 13

Model-Driven Impact Analysis of Software Product Lines

Cho Hyun (University of Alabama, USA)
Gray Jeff (University of Alabama, USA)
Cai Yuanfang (Drexel University, USA)
Wong Sonny (Drexel University, USA)
Xie Tao (North Carolina State University, USA)

Chapter 14

Systematic Use of Software Development Patterns through a Multilevel and Multistage Classification

Azevedo Sofia (Universidade do Minho, Portugal)
Machado Ricardo J. (Universidade do Minho, Portugal)
Bragança Alexandre (Instituto Superior de Engenharia do Porto, Portugal)
Ribeiro Hugo (Primavera Business Software Solutions, Portugal)

Chapter 15

Reducing Enterprise Product Line Architecture Deployment and Testing Costs via Model Driven Deployment, Configuration, and Testing

White Jules (Virginia Tech, USA)
Dougherty Brian (Vanderbilt University, USA)

Chapter 16

Applying UML Extensions in Modeling Software Product Line Architecture of a Distribution Services Platform

Dobrica Liliana (University Politehnica of Bucharest, Romania)
Ovaska Eila (VTI Technical Research Centre of Finland, Finland)

Chapter 17

Model-Driven Requirements Specification for Software Product Lines

Alfêrez Mauricio (Universidade Nova de Lisboa, Portugal)
Moreira Ana (Universidade Nova de Lisboa, Portugal)
Amaral Vasco (Universidade Nova de Lisboa, Portugal)
Araújo João (Universidade Nova de Lisboa, Portugal)

Section 4: Surveys

Chapter 18

Domain Modeling Approaches in IS Engineering

Kirikova Marite (Riga Technical University, Latvia)

Chapter 19

Model-Driven Performance Evaluation of Web Application Portals

Roy Nilabja (Vanderbilt University, USA)
Schmidt Douglas C. (Vanderbilt University, USA)
