

Impacts of Climate Risk and Energy Consumption on Financial Markets

Abdelkader Mohamed Sghaier Derbali (Taibah University, Saudi Arabia)

Description:

The growing impacts of climate change and rising energy consumption are reshaping the global financial markets. As extreme weather events and the transition to low-carbon economies intensify, investors and banks are continuing to factor in environmental risks into their decision-making processes. At the same time, energy consumption trends directly influence corporate performance and economic stability. Understanding the complex interplay between climate-related risks, energy demand, and financial markets is becoming essential for building resilient investment strategies.

Impacts of Climate Risk and Energy Consumption on Financial Markets explore how climate change has directly impacting economies, financial markets, and energy sectors worldwide. This book analyzes the effects of climate risk on energy consumption, innovations in renewable energy, and their implications for the dynamics and development of financial markets. Covering topics such as energy consumption, climate change, and financial economics, this book is an excellent resource for high-level academics and professionals.
