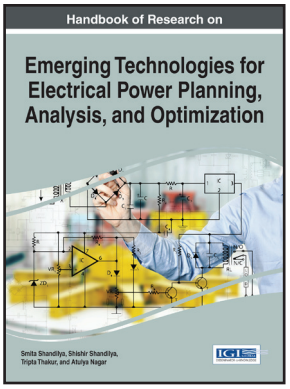
Handbook of Research on Emerging Technologies for Electrical Power Planning, Analysis, and Optimization



Part of the Advances in Computer and Electrical Engineering Book Series

Smita Shandilya (Sagar Institute of Research Technology & Science, India), Shishir Shandilya (Bansal Institute of Research & Technology, India), Tripta Thakur (Maulana Azad National Institute of Technology, India) and Atulya K. Nagar (Liverpool Hope University, UK)

Description:

As the demand for efficient energy sources continues to grow around the globe, electrical systems are becoming more essential in an effort to meet these increased needs. As these systems are being utilized more frequently, it becomes imperative to find ways of optimizing their overall function.

The Handbook of Research on Emerging Technologies for Electrical Power Planning, Analysis, and Optimization features emergent methods and research in the systemic and strategic planning of energy usage.

Readers:

Highlighting theoretical perspectives and empirical research, this handbook is a comprehensive reference source for researchers, practitioners, students, and professionals interested in the current advancements and efficient use in power systems.

ISBN: 9781466699113 **Release Date:** March, 2016 **Copyright:** 2016 **Pages:** 541

Topics Covered:

- Artificial Neural Networks
- Automation Systems
- Electrical Faults
- Energy Loss
- Energy Management
- Load Uncertainty
- Soft Computing
