

# Developing Sustainable Food Systems, Policies, and Securities

Part of the Practice, Progress, and Proficiency in Sustainability Book Series

Abiodun Elijah Obayelu (Federal University of Agriculture, Abeokuta, Nigeria) and Oluwakemi Adeola Obayelu (University of Ibadan, Nigeria)

## Description:

A food system is sustainable if it delivers food and nutrition security for all in such a way that the economic, social, and environmental bases to generate food security and nutrition for future generations are not compromised. Sustainable food systems are vital in ensuring global health and ending malnutrition in all its forms. Assessing important dimensions of the food system such as nutrition, sustainable agriculture, food loss, and waste can provide stakeholders with necessary information to evaluate the strength of their country's food systems and determine where more support is needed.

**Developing Sustainable Food Systems, Policies, and Securities** is a pivotal reference source that explores the nature, extent, and causes of nutrition problems across the world as well as the role that agricultural policy plays in these issues. The book supports the development of sustainable food systems, policy options, and securities by various countries in order to successfully maintain sustainable food production systems. Featuring research on topics such as food security, carbon emissions, and nutrition, this book is ideally designed for economists, environmentalists, food producers, policymakers, researchers, academicians, and students seeking coverage on agricultural and sustainability issues.
