

Quantitative Semantics and Soft Computing Methods for the Web: Perspectives and Applications

Edited By: Ramon F. Brena (Tecnológico de Monterrey, Mexico)
and Adolfo Guzman-Arenas (Tecnologico de Monterrey and CIC-IPN, Mexico)

The Internet has been acknowledged as a recent technological revolution, due to its significant impact on society as a whole. Nevertheless, precisely due to its impact, limitations of the current Internet are becoming apparent; in particular, its inability to automatically take into account the meaning of online documents. Some proposals for taking meaning into account began to appear, mainly the so-called Semantic Web, which includes a set of technologies like RDF that are based on new markup languages. Though these technologies could be technically sound, practical limitations, such as the high training level required to construct Semantic Web pages, and the small proportion of current Semantic Web pages make the Semantic Web marginal today and also in the near foreseeable future.

Quantitative Semantics and Soft Computing Methods for the Web: Perspectives and Applications will provide relevant theoretical frameworks and the latest empirical research findings related to quantitative, soft-computing and approximate methods for dealing with Internet semantics. The target audience of this book is composed of professionals and researchers working in the fields of information and knowledge related technologies (e.g. information sciences and technology, computer science, Web science, and artificial intelligence).

ISBN: 978-1-60960-881-1; © 2012; 305 pp.

Hard Cover: US \$180

Online Perpetual Access: US \$270

Print + Online Perpetual Access: US \$360

Pre-pub Price:*

Hard Cover: US \$170; Online Perpetual Access: US \$255

* Pre-pub price is good through one month after publication date.

Topics Covered:

- Applications of Approximate Semantics
- Approximate Use of Hyperlinks
- Automatic Topic Discovery
- Semantic Algorithms Scalability
- Semantic Similarity Measures
- Semantic-Related Clustering
- Semantics-Leveraged Search Algorithms

Market:

This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.

“It is our hope that in the next years the advancement in the semantic analysis would be reflected in the creation of computer-based sophisticated systems for serving millions of users everyday goals, improving thus their lives in a meaningful way.”

- Ramon F. Brena (Tecnológico de Monterrey, Mexico) and Adolfo Guzman-Arenas (Tecnologico de Monterrey and CIC-IPN, Mexico)

Excellent addition to your library! Recommend to your acquisitions librarian.

www.igi-global.com

Chapter 1:

Clustering via Centroids a Bag of Qualitative Values and Measuring its Inconsistency

Adolfo Guzman-Arenas, Instituto Politécnico Nacional, México

Alma-Delia Cuevas, Instituto Politécnico Nacional, México

Chapter 2:

Probabilistic Topic Discovery and Automatic Document Tagging

Davide Magatti, Università degli Studi di Milano-Bicocca, Italy

Fabio Stella, Università degli Studi di Milano-Bicocca, Italy

Chapter 3:

Smoothing Text Representation Models Based on Rough Set

Zhihua Wei, Tongji University, China

Duoqian Miao, Tongji University, China

Ruizhi Wang, Tongji University, China

Zhifei Zhang, Tongji University, China

Chapter 4:

*Query Based Topic Modeling: An information-theoretic Framework
for Semantic Analysis in Large-scale Collections*

Eduardo H. Ramírez, Tecnológico de Monterrey, México

Ramón F. Brena, Tecnológico de Monterrey, México

Chapter 5:

Combining Diverse Knowledge Based Features for Semantic Relatedness Measures

Anna Lisa Gentile, University of Sheffield, UK

Ziqi Zhang, University of Sheffield, UK

Fabio Ciravegna, University of Sheffield, UK

Chapter 6:

Web Search Results Discovery by Multi-granular Graphs

Gloria Bordogna, CNR-IDPA, Dalmine (Bg), Italy

Alessandro Campi, Politecnico di Milano, DEI, Milano, Italy

Giuseppe Psaila, Università di Bergamo, Facoltà di Ingegneria, Dalmine (BG) Italy

Stefania Ronchi, Politecnico di Milano, DEI, Milano, Italy

Chapter 7:

Learning Full-sentence Co-related Verb Argument Preferences from Web Corpora

Hiram Calvo, Nara Inst. of Science & Technology, Japan

Kentaro Inui, National Polytechnic Institute, Mexico

Yuji Matsumoto, Tohoku University, Japan

Chapter 8:

Evaluating and Enhancing Contextual Search with Semantic Similarity Data

Ana G. Maguitman, Universidad Nacional del Sur, Argentina

Carlos M. Lorenzetti, Universidad Nacional del Sur, Argentina

Rocío L. Cecchini, Universidad Nacional del Sur, Argentina

Chapter 9:

Document Search Images in Text Collections for Restricted Domains on Websites

Pavel Makagonov, Mixtec Technological University, Mexico

Celia B. Reyes E., Mixtec Technological University, Mexico

Grigori Sidorov, National Polytechnic Institute, Mexico

Chapter 10:

Maximal Sequential Pattern's a Tool for Quantitative Semantic in Text Analysis

René Arnulfo García-Hernández,

Autonomous University of the State of Mexico, Mexico

J. Fco. Martínez-Trinidad, National Institute of Astrophysics, Mexico

J. Ariel Carrasco-Ochoa,

National Institute of Astrophysics, Optics and Electronics, Mexico

Chapter 11:

Topic Discovery in Web Collections via Graph Local Clustering

Sara Elena Garza Villarreal, Universidad Autónoma de Nuevo León, Mexico

Ramón Brena, Tec de Monterrey, Mexico

Ramon F. Brena

Ramon F. Brena is a full professor at the Tecnológico de Monterrey, Mexico since 1990, where he is head of a research group in Distributed Knowledge and Multi-agent Systems. Dr Brena is the head of the Master level graduate programs in Computer Science and Artificial Intelligence. Dr. Brena holds a PhD from the INPG, Grenoble, France, where he presented a doctoral Thesis related to Knowledge in Program Synthesis. His current research and publication areas include intelligent agents and multiagent systems, ubiquitous computing and ambient intelligence, formal methods in software engineering, knowledge representation and reasoning, Semantic Web and artificial intelligence in general. He has been a visiting professor at the University of Texas at Dallas and the Université de Montréal. Dr Brena is a member of the ACM and is recognized as an established researcher by the official Mexican research agency, CONACyT (SNI level I).
