Magdalena Ziolo (University of Szczecin, Poland)

Description:

Sustainable development is necessary to counteract and mitigate the impact of socially harmful forces in a globalized world. However, sustainable development and its organizations must ensure the effective management of their funds and beneficial financial frameworks in order to best realize their sustainable goals. There is a need for studies that seek to understand how to connect sustainable development and the financial world in order to maximize the economic and environmental wellbeing of the world.

Social, Economic, and Environmental Impacts Between Sustainable Financial Systems and Financial Markets is a pivotal reference source that examines the funding and monetary utilization of environmental and socially-responsible entities. Featuring research on topics such as green taxes, intergenerational equity, and shadow economy, this book is ideally designed for government officials, policymakers, economists, financial managers, sustainability developers, and academicians seeking current research on the relationship between new sustainable financial phenomena and negative global externalities.
