

Emerging Applications in Supply Chains for Sustainable Business Development

Part of the Advances in Logistics, Operations, and Management Science Book Series

M. Vijaya Kumar (National Institute of Technology Warangal, India), Goran D. Putnik (University of Minho, Portugal), K. Jayakrishna (Vellore Institute of Technology University, India), V. Madhusudanan Pillai (National Institute of Technology Calicut, India) and Leonilde Varela (University of Minho, Portugal)

Description:

The application of sustainability practices at the system level begins with the supply chain. In the business realm, incorporating such practices allows organizations to redesign their operations more effectively.

Emerging Applications in Supply Chains for Sustainable Business Development is a pivotal reference source that provides vital research on the models, strategies, and analyses that are essential for developing and managing a sustainable supply chain. While highlighting topics such as agile manufacturing and the world food crisis, this publication is ideally designed for business managers, academicians, business practitioners, researchers, academicians, and students seeking current research on sustainable supply chain management.
